Midway Project — output.pdf

What it dose

A tiny list of Yardlift jobs in this application has a ret per hour and the hours done pulse the name of the customer. When the software sees a job by client name, it adds jobs and displays all jobs in addition to compute each job's total pay taking numbers of hours and pa.

It save it to txt file

How it work, It displays the sizes of the differents of data enable search which allow the binary search in order a to z it also uses a pointer

A list of content it used

The data type used int, double string and job the file type . txt file jobs .txt for data storage

Classes job one job customer hours rate calculate total and display

Program output (text)
  YardLift Job Manage
Data sizes:
int: 4 bytes
       double: 8 bytes
       string: 32 bytes
       Job: 48 bytes
      All jobs:
       Customer: Alem

Hours: 2
Rate: $30
Total: $60

Customer: Mikel
Hours: 3
Rate: $25
Total: $75

First job, by pointer:
Customer: Alem
Hours: 2
Rate: $30

Total: $60
Found Alem by binary search.

Saved to jobs.txt
Loaded from jobs.txt:

Customer: Alem
Hours: 2
Rate: $30 Total:$60
